EDUCATION

Washington University in St. Louis (GPA: 3.5/4.0) <i>M.S. in Computer Science</i>	St. Louis, MO May 2026
Drew University (GPA: 3.8/4.0) <i>Bachelor in Computer Science</i>	Madison, NJ May 2024

SKILLS

Programming Languages: Java, Python, JavaScript, TypeScript, SQL, C/C++
Frameworks/Tools: Spring Boot, Spring AI, React, Django, Flask, Node.js, Flutter
Databases: PostgreSQL, pgvector, Redis, MySQL, MariaDB, DynamoDB, OpenSearch
Cloud: AWS (EC2, API Gateway, Lambda, CloudWatch), Docker, Apache Kafka, Railway, Vercel

PROFESSIONAL EXPERIENCE

VisionX <i>Software Engineer Intern</i>	San Jose, CA May 2025 - July 2025
Contributed to the development of RingX cross-platform mobile app supporting blood pressure, SpO2, heart rate, and pace tracking for 5,000+ elderly users, enabling caregivers to monitor health data in real time. Expanded and optimized a relational SQL database by designing and integrating new tables (SpO2, heart rate, sleep), normalizing schema, and adding indexes, reducing overall query latency by 30%. Implemented a real-time SpO2 alert API delivering threshold warnings to caregivers, and analytics API generating weekly blood pressure and heart rate reports. Built cross-platform UI pages with Flutter (login, feedback, charts), ensuring consistent and responsive experience across iOS and Android. Integrated Apple HealthKit API to retrieve step count, heart rate, and sleep data, synchronizing with the internal database to provide comprehensive health insights.	
Tencent <i>Software Engineer Intern</i>	Shenzhen, China May 2023 - Aug 2023
Developed and optimized an internal document management system for secure and efficient file transfers, including PDFs, spreadsheets, datasets, and images. Enhanced document security by implementing secure HTTPS communication protocols using Flask, ensuring encrypted data transfer and secure interactions. Utilized parameterized queries to securely interact with MySQL. Implemented secure file storage solutions on Tencent Cloud (CVM/COS), significantly improving reliability and confidentiality of internal documentation. Explored LSTM-based recommendation logic for onboarding content personalization, supporting prototype-level experimentation for internal user guidance.	
Alibaba Group <i>Software Engineer Intern</i>	Hangzhou, China Feb 2023 - Mar 2023
Developed and maintained an internal employee shopping website for commemorative items and custom-designed products, providing service to approximately 500 internal users. Designed, implemented, and optimized database schemas using MySQL and integrated coupon management API via Java Spring Boot, to efficiently support coupon features, enabling employee discount programs. Conducted unit testing with Mockito, achieving 80% test coverage and ensuring system reliability.	

PROJECT

JobCopilot	April 2026
- Built a full-stack AI job application platform using Java Spring Boot, React, PostgreSQL, and pgvector, supporting resume upload, job description management, and authenticated user workflows. - Implemented a RAG pipeline with Spring AI, GPT-4.1-mini, and text-embedding-3-small for semantic resume/JD retrieval and context-aware multi-turn chat. - Designed an asynchronous embedding workflow with Apache Kafka to decouple document ingestion from vector indexing and improve responsiveness for resume and job post processing. - Implemented Redis caching with a 1-hour TTL for AI-generated match analysis results, reducing repeated PostgreSQL queries and OpenAI API calls while improving response time for repeated user requests. - Developed AI-powered workflows including match analysis, cover letter generation, mock interview questions, self-introduction drafting, and JD recommendation ranking, and deployed the backend to Railway and frontend to Vercel with JWT-based authentication.
